## Portfolio / AC the Barber UI Design

### 1. Introduction

- Give a brief introduction to your project and the list of features. Summarize in a few sentences what you proposed in the
  - ❖ Booking / Appointment feature / Display Hours of operation at all times => connect to Mongo, MySQL, SQL, or some other data storage to store appointments
  - ❖ Introduce the staff of the barber shop and work they can show via gallery
  - ❖ A Menu that shows all available services and prices

### 2. User Interface Design and Prototype

- Give some sample user interface layouts for your application. You can use either wireframe diagrams or prototyping tools to construct the mock representations of your UI design

(Please refer to my written design)

(Please refer to my handwritten diagrams)

There are 4 pages:

1. Barbershop.html - directory of barbers and profiles
2. Services.html - display all services and associated prices
3. Gallery.html - provide samples of each barbers work ... w/ ability to filter Barber
4. Booking.html - Core .. Allow user to book an appointment
5. Index.html - Business updates/sales/news and home to all available avenues of interest

- Briefly explain the rationale behind designing your UI and how it is geared towards supporting the list of features for your application.

- ❖ The rationale behind my design is ease of use.
- ❖ User ability to look at work that was performed by barber, and make a decision based on work provided by barber.
- ❖ Ease of scheduling.
- ❖ User ability to show satisfaction by posting reviews.
- ❖ Goal - increase clientele, booking, customer satisfaction, marketing, and networking abilities
- ❖ Main Objective : "If my skill can help someone else succeed and be seen as they should, ... I'm satisfied ..."

### 3. Navigation Structure

- Give a brief overview of the navigation structure for your application.

I plan to have an reference to the core elements of the website, and always allow the user to head to the homepage if needed.

Each page should always present the user the opportunity to book an appointment

The footer will always offer the opportunity to navigate to other areas of the website

- Briefly indicate a typical flow of your application in terms of user experience. You can use any way of representing the flow. You can also construct a prototype using one of the prototyping tools to illustrate this.

*(I've drawn out the my representation and will submit my drawings.)*

- In general, everything starts at the homepage ... the user will go to the area of interest, and will always have the ability to go to homepage and go a different route. If there are any questions, the user can always make contact by phone or get directions via google maps.  
(Give the user every reason to stay)
  - The user can look at work completed for any barber at the shop, and they can determine if they want to move forward with a particular barber
  - User can simply click a button to schedule an appointment, and based on the current schedule, adjust their schedule to fit their needs.
  - Users are free to post their own hairstyles and a comments which is great for business and any specific barber
- Provide any references relevant to the report.
